Abstract (en)  
[origin: US2012061999A1] Various embodiments of the present invention are directed to an adjustable children's booster seat. In various embodiments, the booster seat includes a child support (e.g., a child seat) having a user-adjustable height and tilt angle. In particular, various embodiments of the booster seat include one or more improved tilt control devices and height control devices configured to enable a user to easily adjust the child support's height and tilt angle. In certain embodiments, the booster seat's frame is also configured to have a narrow profile enabling the booster seat to fit on a wide variety of chairs.
