Abstract (en)
[origin: WO2012034744A1] The invention relates to a normally closed magnetic valve (1), having a valve sleeve (2), in which a pole core (3) is fixedly arranged and in which an armature (4) having a valve tip (9) is axially movable, wherein a helical spring (10, 18) acts between the pole core (3) and the armature (4) in order to push the valve tip (9) into a valve seat (6). The pole core (3) has an axial recess (11) in which at least part of the helical spring (10) is received in order to guide same.
