Abstract (en)  
[origin: WO2011154745A2] A web-winding core is disclosed that is formed as a hollow cylindrical shell, the shell being a three-layered sandwich comprising internal and external skins, between which is a filler to which the inner and outer skins are bonded. The filler may be a lightweight natural material such as balsa or cork, or an artificial foamed polymer. The internal and external skins may be reinforced resin. The reinforcement may be natural or artificial fibres.
