Abstract (en)
[origin: WO2012034915A1] The invention relates to a grid-type safety gate, in particular for children or household pets, comprising a barrier member (1) with a predetermined width for blocking off an opening of relatively large width between the positionally fixed structures, at least one retaining member (12) for securing the barrier member (1) to the structures, and at least one first extension piece (8) which is provided between the retaining member (12) and the barrier member (1) in order to bridge at least part of a difference between the width of the opening and the width of the barrier member (1), wherein the extension piece (8) comprises at least one portion which is extended in a longitudinal direction and can be inserted to an insertion depth into a bearing opening (14), said portion having an abutment part (8d), wherein the abutment part (8d) butts selectably at a first insertion depth or at least one second insertion depth differing from the first.
