Abstract (en)

[origin: WO2012034823A1] The hydraulic temperature compensator (5) comprises at least one longitudinally extendable hydraulic chamber (10, 11) and a gas filled chamber (12) which is at least partially surrounded by the hydraulic chamber (10, 11), wherein the hydraulic chamber (10, 11) is subdivided into a first sub-chamber (10) and a second sub-chamber (11), wherein said chambers are hydraulically connected to each other by means of at least one throttle point (24), and wherein the second sub-chamber (11) adjoins the gas-filled chamber (12). The lift transmitter (1) comprises at least the hydraulic temperature compensator, a lifting actuator (2) which acts on the temperature compensator (5), and an additional hydraulic chamber (18a), which is fluidically connected to the first sub-chamber (10) of the hydraulic chamber (10, 11) of the temperature compensator (5), wherein the additional hydraulic chamber (18a) is fluidically connected to an adjustment element (20) which is slidably mounted.
