Abstract (en)
[origin: WO2012035007A1] A mounting device for a spotlight (1) which is intended to be installed in the mounting opening (101) of a ceiling (100) or wall comprises an installation frame (20) which has means for pivotably retaining a spotlight head (10) and is connected to at least one latching element (30) which, by means of a lateral deformation, can be transferred from a mounting position into a latching position, and also actuating means assigned to the latching element (30) for transferring the latching element (30) from the mounting position into the latching position, wherein the actuating means are accessible when the spotlight head (10) is in a pivoted-out state.
