Abstract (en)

[origin: EP2463733A1] The strap-watch (1) has a case (24) made of non-conductive material of electricity. The case includes a housing in which a battery (28) is housed. The housing is closed by an electrically conductive battery cover (30). The cover is made of electrically conductive metallic material, and mounted on the strap-watch with the interposition of an electrically conductive sealing joint (32) between the cover and one out of a set of terminals of the battery, where the sealing joint is made of elastomer material charged of conductive particles.
