Abstract (en)

[origin: WO2012084029A1] The invention relates to a method for providing a data memory architecture for transmitting data from a data provision apparatus (5) to at least a first (8) and a second appliance (9), having the following steps: a) an electronically and/or optically readable data storage medium (1) is provided; b) a data memory in the data storage medium (1) is partitioned into at least a first (2a) and a second data memory part (2b); and c) a data memory part manager (3) is stipulated, so that for the purpose of reading data from the first data memory part (2a) it is possible for the first appliance (8) but not the second appliance (9) to access the first data memory part (2a). The invention also relates to a method for transmitting data and to a system having a data provision apparatus.
