Abstract (en)
[origin: WO2012034142A1] The invention relates to a multifunctional, compiled and programmed anti-theft device, which contains a novel operator control, controller and supplementary functions, for moving articles, combinable with two or more articles or parts, having a 3D all-purpose/smart sensor (2) for alarm triggering and menu operator control by means of individually determined housing movement. The alarm sound consists of individually spoken words, sentences or is combined with alarm sounds. Movements on the 3D terrain are sensed by the 3D sensor, are recorded and can be presented on a "display" (7) or by means of computer applications. A programmable microchip (1) with a data capacity undertakes the control, monitoring, data storage, (data) management and (data) interchange by means of USB, Bluetooth, radio, etc. (11). The alarm is triggered in the event of movement or, in the case of two parts (16), in the event of a sensor or signal interval being exceeded (integration in articles and/or combination with a mobile phone (10), GPS (9) or the like (10) and the functions thereof is likewise possible). The anti-theft device may be designed to be fixed, removable or integrated on the article to be protected.
