Abstract (en)
[origin: EP2617494A1] The tool (16) has a tool base body (14) and an exchangeable tool cutting edge, which is inserted into a tool carrier, where the tool base body is formed in a wedge-shape on a section of the length of the tool base body, and has four mounting surfaces, which lie against each other in pairs. One pair of the mounting surfaces is less widely spaced than another pair of the mounting surfaces. The tool base body is fixed in a mounting position by a tensioning element, where other mounting surfaces spaced from each other are arranged on side walls of the tool base body. An independent claim is included for a crushing device.
