Abstract (en)

[origin: EP2617667A1] The method involves transporting press products (1) with lower and upper conveyors (2, 3) to a package forming unit. The press products are arranged one above another in an overlapping manner. Gaps and/or unwanted gaps (1") between scale form press products one above the other are detected. A ramp (11) is activated with respect to transport direction of the press products arranged behind the unwanted gap, where the press product is raised by the ramp, so that press material is presented in a scale form on a held press product (1'). An independent claim is also included for a device for forming packages or subpackets of loosely stacked printed products.
