Abstract (en)
[origin: EP2617907A2] The gutter has a gutter body (1) extending with respect to a slot-like gutter aperture (5) and exhibiting a triangular cross-section. Slotted walls (4) laterally limit the gutter aperture, and supporting flanges (7) support a floor cover and form a ceiling (2) of the gutter body. The slotted walls project from the supporting flanges, and passage apertures (10) for seeping liquid are formed in an edge area of the ceiling of the gutter body. The slotted walls are spaced from each other by a spacer (6), and bow-shaped mounting plates (11) are arranged on two sides of the gutter body.
