Abstract (en)

[origin: EP2617922A1] The device has a door (4) presenting a front face (6) and a rear face (5), and a guidance system (16) comprising a guidance element (18) arranged remote from another guidance element (17). The former element is arranged on a side in an offset manner relative to the rear face in an upright position. A spacer (19) is associated with the door and movable in rotation relative to the door. The spacer is mounted movable in rotation around an axis (24) parallel with the rear face, located below the guidance elements, and fixed at the guidance elements. The guidance elements are rollers. An independent claim is also included for a closure device assembly.
