Abstract (en)

[origin: EP2617935A1] A louver system, providing natural ventilation at all openings and doors, wherein connections parts (3) (4) thereof with special geometric section, which are mounted to both sides of the vent profiles (2) by sliding and compressing without requiring an auxiliary connection member during production thereof and whose sliding distance is determined manually or self controlled way by means of a stopper provided on the part, are mounted into the connection part channel (1.2) provided on the frame profile (1) only by sliding; and wherein the distance between the vents is fixed and equal and automatically determined by means of the special geometric sections of the connection parts (3) (4) which enable the vent profiles (2) to be fixed within the frame; and which system conceals the connection details of the insect screen and bird screen (9) applications and enables to be screwed at the application opening from outside through the gap between the vents.
