Abstract (en)

[origin: EP2618083A2] The appliance i.e. built-in household cooling device (1), has a body (3), a recess closing device and a device covering wall (9) connected with the body. A holding device is connected with the body and provided for connecting the closing device with the body in a mounting position. The covering wall has a retaining section that is designed for partially or completely accommodating the closure device in a transport position of the closure device. The covering wall has a fastening unit i.e. snap-on connection, for fastening the closure device to the covering wall in the transport position. The covering wall is designed as a plastic injection molding part.
