Abstract (en)

[origin: EP2618096A1] Compressed gas in the air chamber body (122) passes through a gas discharge portion (194) and shoots a bullet (B) held by a bullet holding portion (192) out of a muzzle (103). A valve (123) establishes or breaks communication between the air chamber body (122) and the gas discharge portion (194) according to operation with an operation portion (130). The toy gun includes multiple gas cartridge attachment portions (210). A gas bomb (102) is attached to each of the gas cartridge attachment portions (210). Each gas cartridge attachment portion (210) is provided with a first valve portion (211). Compressed gas in the gas bomb (102) attached to each gas cartridge attachment portion (210) is guided into the air chamber (126) by way of a gas introduction portion (301).
