Abstract (en)

The invention relates to a connector housing (1) with a housing body (2) and at least one locking element (3) for securing contact elements. In order to be able to latch the locking element (3) in its securing position (P) with a constant force, the invention provides that at least one latching element (12) is arranged on a side of the locking element (3) that faces away from a fixed end (29) of the locking element (3).
