Abstract (en)
[origin: WO2012037701A1] The shower wall arrangement (5) for a corner shower comprises fixed walls (1) and sliding doors (3), which are fastened or movably mounted in a guide (7) at least at the top. The sliding rails (9) of the upper guide (7) meet at a corner (11), which is formed by a corner element, which the sliding rails (9) abut at an obtuse angle and at which the sliding rails are fastened. Covers (71) completely cover the sliding rails (9) and the corner element except for the front rounding from the outside. A fine terminating element connects the two end-face ends of the covers in such a way that the elements that connect the two sliding rails (9) are not visible from the outside.
