Abstract (en)
[origin: WO2012059414A1] The invention relates to magnetic cell detection and the specific labeling of cells. The cell type to be detected is labeled, magnetic labels being bound to epitopes of a first cell-specific epitope type via antibodies of a first antibody type. Additionally, second/further magnetic labels are bound to epitopes of a second cell-specific epitope type on the cells via antibodies of a second antibody type, or the magnetic labels are bound to the antibodies of the first antibody type via antibodies of a fourth antibody type and said antibodies of the first antibody type are bound to the epitopes of the first cell-specific epitope type on the cells.
