Abstract (en)  
[origin: CA2811160A1] According to the invention, the cable of the passenger transport equipment in an urban environment is elevated and extends over the middle of the street (5), and the vehicles (1) stop in an elevated state in the station. An automatic mechanism, comprising an elevator jack (12) and a pull-out platform, makes it possible to transfer the passengers from the sidewalk on the ground to the elevated vehicle by means of a vertical movement followed by a transverse movement.
