Abstract (en)  
[origin: WO2012037961A1] The invention relates to a box comprising a base (12) and at least two pairs of opposing lateral walls (14a, 14b, 16a, 16b). A first of the lateral walls (16b) extends upwards from the base (12) in a vertical direction (18) at least partly only by a removal height (20) that is shorter than the height of one or more of the remaining lateral walls (14a, 14b, 16a) in order to define a lateral opening with dimensions that allow access to and removal of products contained in the box through the lateral opening. Furthermore, a blocking element (100) is provided which extends between the two opposing lateral walls (14a, 14b) that adjoin the first lateral wall (16b) and which can be moved between a first position and a second position. The blocking element is arranged between the opposing lateral walls (14a) and (14b) and at a distance from the first lateral wall (16b) in the first position and in an overlapping manner with the first lateral wall (16b) in the second position.
