Abstract (en)
[origin: WO2012038665A1] The invention relates to an electrical three-phase power connector (1), comprising a plug (13) and a socket (3b), each of which respectively includes a housing (13, 11) and three electrically conductive contacts (9, 7) at least partially housed inside the housing (13, 11) and each corresponding to one electric phase of the electric current transmitted by the connector (1), wherein each of the three electrically conductive contacts (9, 7) is at least partially surrounded by an electrically insulating sheath.
