Abstract (en)  
[origin: EP2620188A2] The ski binding has a toe clamp and a heel clamp (4) arranged on a carrier (1), which is rotatably mounted about a transverse axis in a region of the toe clamp, where the distance between the toe clamp and the heel clamp is variable while maintaining the position of the heel clamp on the carrier. The carrier includes a climbing aid having a locking device (6) with a locking lever (14) mounted on a base part (8). The base part is fixedly connected to a ski at a support tube (3) and slidable in a longitudinal direction corresponding to a mutual spacing of the clamps with a guide rail (7).
