Abstract (en)
The present invention refers to a toy with a reversible base of the type intended to be propelled manually or with the aid of a manual operating tool for moving it during game play. The toy comprises a multiform body (1) having coupling means (12,13) for assembling it on a support base (2). The multiform body (1) and the support base (2) may be assembled in different assembly positions allowing different movements of the toy depending on the specific assembly position.
