Abstract (en)

It is described a device (1) for the sliding on cables (10) comprising a base body (2), at least one connecting element (3) openable to couple the base body (2) to a load and/ or to at least one cable (10), and means (20, 21, 22) for the sliding on the cable. Furthermore, the device comprises at least one hub (5) provided with at least one opening (6) passing through it in which the connecting element (3) is inserted, and the base body (2) is rotatable with respect to the hub (5) and with respect to the connecting element (3).
