Abstract (en)

[origin: EP2620534A1] The caliber (10') is assigned to the cylinders on a drive side and a guide side, so that the caliber adjusts a cylinder gap between the cylinders. The caliber consists of two bodies (11',12'), of which one body is rotatably mounted. The bodies are received with a common rotational axis (17) along the displacement direction between the elements, so that the bodies contact with their mutually facing end faces. The end faces are formed in stepped manner. The bodies are received coaxially on a common piston.
