Abstract (en)
The present invention relates to a laundry drying machine (1) comprising a casing (10), a laundry container (6) suitable for receiving the laundry to be dried, an air circulating device for circulating hot air through the laundry container (6), a condensing device for removing moisture of moist air coming from the laundry container (6) and a basement portion comprising a water collecting housing (11) for the collection of condensation water formed by the condensing device. A water-removing unit (12) is associable to the water collecting housing (11) for the removal of water therein and comprises a supporting body (21) suitable for receiving a pumping unit (22). The supporting body (21) is obtained in a single piece construction with the basement (14).
