Abstract (en)  
The present invention relates to a laundry drying machine (1) comprising a casing (10), a laundry container (6) suitable for receiving the laundry to be dried, an air circulating device for circulating hot air through the laundry container (6), a condensing device for removing moisture of moist air coming from the laundry container (6), a water collecting housing (11) for the collection of condensation water formed by the condensing device, a water-removing unit (12;62;72) is associable to the water collecting housing (11) for the removal of water therein comprising a supporting body (21;121) suitable for receiving a pumping unit (22) and a water level sensing device (23;123), the supporting body (21;121) may comprise cover element (27) which is obtained in a single piece construction with the supporting body (21;121), the supporting body (21;121) may comprise at least a portion (150) of the water level sensing device (23;123) which is obtained in a single piece construction with the supporting body (21;121) and/or a seat (89) for receiving a pipe (41) therein and comprises a fastening device (80) which is obtained in a single piece construction with the supporting body (21;121) for fixing the pipe (41) in the seat (89).
