Abstract (en)

[origin: EP2620542A2] The method involves determining a use state of an electrically heated apparatus. The vapor production of the electrically heated apparatus is activated in the determined use state without user intervention. The flow of the water used for vapor production is controlled into a steam chamber in dependence of a temperature of the steam chamber. The temperature of the steam chamber is estimated and vapor production is deactivated when detecting that the electrically heated apparatus is not in use. An independent claim is included for electrically heated apparatus.
