Abstract (en)
[origin: EP2620549A1] The machine (1) has a controllable transverse conveyor device (7) for mixed laying material arranged behind the machine in a moving direction. A control unit (10) is connected to a sensor (9) for determining a mixed laying material quantity or rate. The control unit adjusts a delivery rate of a controllable longitudinal conveyor device (6) and/or the transverse conveyor device based on a signal received from the sensor representing the laying material quantity or rate. The control unit is pilot controlled based on laying parameters (4a-4d) e.g. laying widths, using a pilot control unit (2). An independent claim is also included for a method for operating a road finishing machine.
