Abstract (en)

[SUBJECT] To provide a latch releasing system for a vehicle door, which allows an emergency operation member to be provided at an outer surface side of a door to increase the operability, and which eliminates the need for a cover member covering the emergency operation member, the latch releasing system for a vehicle door, comprising: a latch device being provided to the door, to which an outer handle is provided, in such a manner as to be capable of actuating an electric actuator in accordance with a predetermined operation by a vehicle user and latch releasing in accordance with a mechanical input of a latch-releasing operation force; and the emergency operation member having an operation section capable of being operated by the vehicle user from outside of a vehicle, the emergency operation member being provided to the door in such a manner as to be capable of exerting the latch-releasing operation force to the latch device. [MEANS FOR SOLUTION] An operation section 28a of an emergency operation member 28 is provided at an outer surface side of a door D adjacent to an outer handle 7 while having an outer surface continuously flush with an outer surface of the outer handle 7.
