Abstract (en)

[origin: EP2620572A2] The blocking device (3) has a key (5) which is driven by bolt (6) between two positions. The bolt in closed position forms a positive connection between the frame (1) and leaf (2), and releases the movement of the leaf against the frame in release position. An actuating shaft is connected with the bolt and is connected with form-fit surfaces for generating positive lock of the key with the operating shaft. The actuating shaft comprises a blocking device for blocking the movement. The blocking device to unblock the actuating shaft is controllable by the key.
