Abstract (en)

[origin: EP2620575A2] The aperture support device has an aperture support working spring element (8) which is provided between the blind frame (2) and a wing frame (3) of the window (1). The aperture support working spring element is connected in series with several springs (9) with different spring constants. The spring has a main spring and auxiliary spring such that spring rate of auxiliary spring is smaller than the spring rate of main spring. An independent claim is included for window.
