Abstract (en)

[origin: WO2012040751A1] The invention relates to a feeding station for pets, comprising a housing (1) and feed drawers (3, 4) that can be pulled out independently of each other so that water and solid feed can thus be dispensed in a controlled manner independently of each other. A first drawer (3) that can be pulled out of the housing (1), in particular for accommodating a feed bowl (6), is provided. A second drawer (4), in particular for accommodating a water bowl (11), can be pulled out from the first drawer independently. The housing (1) is designed as a separate installation part for installing in a commercially available cabinet (1'), for example by removing a cabinet drawer.
