Abstract (en)
[origin: US2012079659A1] A support pillow providing head and neck support to a user laying upon it. The pillow employs a support insert surrounded by a pillow casing having planar top and bottom surfaces and a sidewall extending between them. An insert engaged in the casing provides substantially planar support surfaces with a centrally located void providing a relief for positioning one's head on the pillow. Proper support and spine alignment is provided by a shoulder portion of the pillow for the neck which may be formed of different material than the pillow.
