Abstract (en)  
[origin: WO2012041495A1] The present invention relates to a multichamber container with a container housing (2) comprising at least two chambers (10, 12) arranged one above the other for receiving product components and a dosing element (14), which delivers the product components by means of plungers (4, 8) which are assigned to the chambers (10, 12) and can be moved in the longitudinal axis of the container. The present invention addresses the problem of providing a multichamber container which delivers the product components from the chambers in an improved way. The multichamber container according to the present invention has at least one plunger (4, 8), which is in movable engagement with an element extending in the longitudinal axis of the container.
