Abstract (en)  
[origin: WO2012041940A2] The invention relates to a floor (1) for a railway vehicle, consisting of an at least two-layered structure comprising a wear layer (2) and a support layer (3). The support layer (3) is made of metal and is designed to create a permanent connection to load-bearing parts (7) of the railway vehicle and contributes to the stability of the entire railway vehicle.
