Abstract (en)

[origin: WO2012045943A1] The invention relates to a support produced by molding a plastic material, which receives a subassembly (70) for moving same on a serial assembly line, comprising first means for positioning said carrier with respect to the assembly line, and second means for positioning the subassembly relative to said support, characterized in that it comprises metal inserts (24, 26, 28, 32, 34) built into the carrier (21) during the molding thereof, wherein said inserts are then machined so as to at least partially produce the positioning means.
