Abstract (en)
[origin: WO2012041319A1] The invention relates to a lid (2) for a container (1), where the lid is made from a thin plate-shaped material and adapted to be mounted on and hermetically close the container (1). Moreover, the lid comprises score lines (3) where the thin material can be torn to form a discharge opening (12) in the lid, where the starting points (4) for tearing the score lines are located at the brim (5) of the lid. The lid further comprises an area bulging out from the brim between the score lines to form a gripping device (6) and the lid is made from metal.
