Abstract (en)
[origin: WO2012041794A1] An arrangement for light emission has at least one LED light-emitting means (110) in an elongate arrangement, a support element (120), which supports the LED light-emitting means (110) and a light emission element (130) which can be connected to the support element (120). The light emission element (130) is designed to modify the light emission characteristic of the LED light-emitting means (110) to give the light emission characteristic of at least one fluorescent tube.
