Abstract (en)

[origin: WO2012041791A1] The invention relates to a light comprising at least one LED (2) as a light source. The light also comprises a support element (4) on which the at least one LED (2) is arranged, and a light housing (6). Said light housing (6) comprises a recess (8) in which the support element (4) is introduced in a detachable and reversible manner. Said embodiment of the light allows the support element (4) to be separated from the remaining light in a simple manner and as a result, in particular the light source can be exchanged. Thus, the handling of the light, in particular for changing the light source, is simplified.
