Abstract (en)  
[origin: EP2623214A2] The dispenser (1) has a receptacle (2) for one or multiple containers, where a piston rod (3) and a feed mechanism (4) is provided for displacing the piston rod towards the receptacle. The feed mechanism has a clamping element. The feeding mechanism is connected with the piston rod to be movable with the receptacle. The feeding mechanism is displaceable with the piston rod along a feed axis from one position to another position relative to the receptacle. A decoupling element (5) of the feeding mechanism is designed as a carriage system, a plate spring or a plastic damper.
