Abstract (en)

[origin: EP2623306A1] The method involves allowing assembly of a cellulosic material (3a) that is covered with a reactivatable barrier material (3b). A laminating part is arranged between a cardboard lid (3) and a safety membrane. The laminating part is arranged with a shape conjugated to a shape of an opening of a tubular body. The laminating part is made from a material selected from a group consisting of paper. A material forming the safety membrane is made up of paper that is coated with a reactivatable barrier material on a surface that is not oriented towards a laminating part. Independent claims are also included for the following: (1) a method for manufacturing a cardboard packing (2) a cardboard packing (3) a sealing structure.
