Abstract (en)

The present invention relates to a pile for deep foundation piling, which pile is driven or arranged to be driven into the ground, the pile comprising an upper concrete pile section comprising an upper axial end provided with an upper drive-fit connection member arranged for cooperation with a tube member, such as a steel tube or pipe, having a predetermined radial dimension, and a final upper pile section formed of a tube, such as a steel tube or pipe, having the predetermined radial dimension, wherein a lower axial end of the final upper pile section is attached by drive-fit cooperation with the upper drive-fit connection member of the upper concrete pile section. The present invention also relates to a method for manufacturing a pile for deep foundation piling.
