Abstract (en)
[origin: EP2623691A1] The cover (1) has a tensioning unit to stretch the cover in deployed position above a basin, and a stowing unit to fasten the cover at a surrounding zone of the basin. A peripheral frame (3) carries the units and delimits a central opening (30). A fixed panel (4) closes the opening, and is assembled with the frame in an irreversible manner. A tarpaulin (2) has a removable panel (20) covering the fixed panel and assembled with the frame by reversible assembly units so as to allow an interchangeability of the removable panel. The frame and the removable panel are made of flexible materials. The fixed panel is chosen from a wired or non-wired net, a wired or non-wired and perforated or non-perforated fabric, and a wired or non-wired and transparent or translucent flexible material. The flexible material forming the removable panel is chosen from a transparent or translucent wired or non-wired flexible material, an opaque or semi-opaque wired or non-wired material, a perforated or non-perforated fabric and a net. The flexible material forming the frame is chosen from a transparent or translucent wired flexible material, an opaque or semi-opaque wired or non-wired material, a perforated or non-perforated fabric and a wired net. The reversible assembly units are chosen from rings to be engaged with hooks, self-gripping bands, zippers (RTM: slide fasteners), and press buttons.
