Abstract (en)

[origin: EP2623697A2] Camcorder housing (100) having a hinge (50) comprising a first hinge element (11, 12, 21a) associated with a base (1) having a seat (18) adapted to house a pin (26) of a second hinge element (21) associated with a cover (2), said first and second hinge elements being arranged to cooperate with each other in order to allow the mutual rotation of the base and the cover around the axis of the pin (26), wherein the housing (100) comprises a first hinge and a second hinge (50), each associated to a different side of the housing (100) and the seat (18) has an opening (20) having a width such as to allow the passage of the second pin (26) in its inside in a direction substantially perpendicular to the plane passing through the axes (A-A, A'-A') of the first and second hinges (50), allowing the separation of said base (1) and said cover (2) when the housing is closed.
