Abstract (en)

[origin: WO2012062306A2] The present invention relates to a combination of analysis methods in a device for detecting tumors, wherein the combination of analysis methods comprises the analysis method of multi-photon excitation and/or the analysis method of second-harmonic generation and furthermore comprises either the analysis method of coherent anti-Stokes Raman scattering or the analysis method of stimulated Raman scattering. According to the invention, in order to improve the reliability of the tumor detection, said analysis methods are combined.
