Abstract (en)

[origin: CA2818886A1] The invention relates to a hammer, in particular for comminuting devices, comprising a rotor and/or at least one shaft to and/or on which the hammer (1) can be fixed. Said hammer consists of a lower body (2) provided with a through hole (A) which is provided to connect the hammer (1) to the rotor and/or the shaft, and at least one cutting body (3) which can be detachably/rigidly connected to the lower body (3). The invention is characterised by the fact that the cutting body (3) consists of at least two parts.
