Abstract (en)  
[origin: WO2012045679A2] The invention proceeds from an oscillating hand-held power tool having at least one output unit (70a; 70b) which comprises at least one output shaft (72a; 72b), having at least one drive unit (74a; 74b) for oscillating drive of the output shaft (72a; 72b) and having at least one housing unit (10a; 10b) for accommodating the drive unit (74a; 74b) and the output unit (70a; 70b), which housing unit (10a; 10b) has at least two housing shells (12a, 14a; 12b, 14b). It is proposed that, in a mounted state, the housing shells (12a, 14a; 12b, 14b) have at least one connecting plane (78a; 78b) which extends substantially perpendicularly with respect to a movement axis (76a; 76b) of the output shaft (72a; 72b) and in which the housing shells (12a, 14a; 12b, 14b) are connected to one another.
