Abstract (en)  
[origin: WO2012045116A1] The present invention relates to a blister pack sealed to the neck of a container and adapted to fit under the container lid forming a seal, said blister pack containing a liquid soluble material such as dissolvable aspirin. When force is applied to the blister pack, the base, which is comprised of a rupturable material, breaks and allows the liquid soluble material to be mixed with the liquid in the container. The blister pack remains as a seal for the container until it is desired that the user remove the blister pack for access to the container. The user can then re-seal the container using the container lid.
